

DATA AGENT SERVER

With the largest installed base of customers in the intelligent alerting space, Global Software, UK Ltd. is the leading provider of application integration and business task automation systems.

Most organisations maintain vast amounts of detailed data about the business in several disparate database applications, but have very limited access to timely integrated, actionable information.

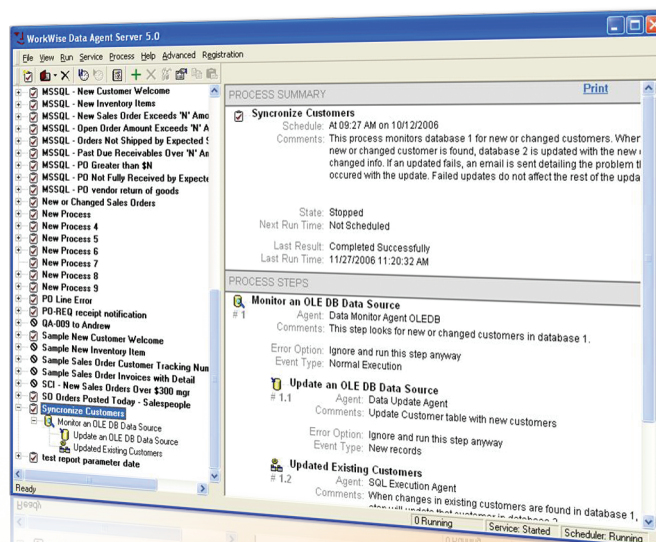

Data Agent Server can monitor all applications for specified business activities and deliver an integrated, contextual view of the required information, allowing people to make informed decisions and take intelligent actions.

Benefits include:

- Monitor date-and time-sensitive events
- Check status of data, such as credit holds, inventory thresholds and sales ratios
- Merge data into email messages
- Pass data, files and messages through the pipeline
- Manage information across multiple databases, including Accounting, HR, SCM, CRM, and more
- Gain programming power with point-and-click ease
- Streamline your business processes with point-and-click ease
- Keep employees informed for better decision-making
- Improve customer service and retention
- Automation of Distribution Manager for use with Excel workbooks
